General Comment

I have been opposed to the WCS storage of any nuclear waste for over a decade. While we may live out here in the desert and away from large cities, I believe that transporting the spent fuel rods by means of rail through my city, Midland Texas, would be a high risk venture. Train derailments are far too frequent, The shipments would be open targets for terrorists, and as our new administration is so urgently warning us, they are everywhere. Spent fuel rods should be disposed of at the point of origin, not wasting tax dollars on transporting them all over the country and putting countless people at risk.
