## General Comment

reference: Docket ID NRC-2016-0231

The proposal is ridiculously short-sighted. Nuclear waste is dangerous for thousands of years. Other storage facilities, especially those near bodies of water, have contaminated land and wildlife, and endanger residents, who can't tell from the bland Keep Out signs and barbed wire, why the turtles and fish in areas they have subsisted on for generations are no longer safe to eat.

Until Trump was elected, we were transitioning to sustainable energy sources. If Congress and officials at the national and local levels have any sense, they will continue to move in that direction. Please don't side with non-thinking profit-mongers, who have always felt free to pollute the land, water, and atmosphere for short-term gain. Don't believe their argument that nuclear power is non-polluting. Obviously, that's not the case. Their short-sightedness is breathtaking; their influence over our lives, so disappointing.

You are the ones who can stand up for logic and say no. For all of our sakes, please point out the folly of poisoning ourselves and the planet, whether during transport of waste to Texas, from contamination of the site due to breached or compromised containers, or from changes in the land that would result in contamination of the water table and everything that the water touches.

Last, I highly recommend an evidently well-researched and thought-provoking Independent Lens film called

*SUNSET Review Complete*  
*Template = ADM-013*

*K-REDS = ADM-03*  
*Call = S. Park (SRP)*

"Containment."

Thank you for listening.
