General Comment

Please do not approve - ie please do not act - on the Interim storage facility that Waste Control Specialists wants to open in Andrews County Texas..

Low level waste is different- > class C is different. As it has in the past WCS can package up low level waste and keep it

per the compacts, and as WCS has done. The Ogallala aquifer is too precious to risk damaging the water source for the breadbasket of our nation because of one company's hubris that it wants to hold the unholdable- High level waste.

The transportation of dry casks across the country is frightening, with multiple risks,

The privatization of the storage of atomic waste is a route that may likely lead to the sacrifice of land due to radioactive contamination.
