Subject: Final Summary of 3/9 call w/NFS re: GL 2015-01
Date: Tuesday, March 14, 2017 2:05:00 PM

On March 9, 2017, the following individuals participated in a call regarding the status of response actions for questions concerning Generic Letter 2015-01, "Treatment of Natural Phenomena Hazards in Fuel Cycle Facilities":

Kevin Ramsey, NRC
Jonathan Marcano, NRC
Brannen Adkins, NRC

Amaryl Morie, NFS
Nick Brown, NFS
Emily Senter, NFS
Bob Mauer, NFS
Sam Skiles, NFS
Blaine Rice, NFS

NFS reported that work on the RAI responses is ongoing. There is no new information at this time.

As a follow-up to the discussion last week, NRC asked if NFS could support a site visit during the first week of April. NFS responded that input from its contractor isn't expected until the end of March. It would still be evaluating the information during the first week of April and not in a position to show us anything new. NFS believes we should wait until after the RAI response is submitted on April 19.

NRC asked if NFS would like to schedule a call just before April 19 to discuss the responses before they are put in the mail. NFS stated that it expects to completely revise its previous response and replace the bounding scenarios with the new calculations and analyses it is developing. They don't believe a phone call would be helpful because they won't be able to convey the details over the phone.

NRC asked if any changes to the management meeting next week (during the RIC) were needed. NFS said no. NFS managers will work directly with NRC managers if any changes are needed.
