Mr. McMurtray:

Thank you for the opportunity to comment on and him. Below are a few observations and comments from Washington State on NUREG- 1556 V.17 Revision 1, January 2017.

Coverage of specific Part 37 elements of security in this NUREG was efficient. It makes it much easier for and applicant to have basic one-stop shopping to know what they need to do to apply for a license. I've noticed that not all of the other revisions of NUREG- 1556, provide this advantage.

Knowing the amount of work that goes into updating and revising each of these volumes, the volume appears to be very complete and relevant.

The last comment is cosmetic only. It is about the numerous empty pages in a PDF document for download. It appears as if the document is still being formatted as a printed document. I wonder if NRC might consider, in the future, formatting the downloadable documents without the extra blank pages?

Thank you once again, both for the revision, and the opportunity to comment
