General Comment

I am against bringing toxic nuclear waste to Texas. As a Dallas resident, I don't want between 65-75 percent of the country's high-level radioactive waste shipped through the Dallas-Fort Worth area. Also, the waste would sit near the nation's largest aquifer, the Ogallala Aquifer. This is an environmental hazard and also poses a security threat as it would be transported via rail near Fort Worth. Please do not approve this application. Once it is here it is likely here to stay, as difficult as it is to move it. We don't want or need a toxic landmine in Texas.

Sincerely,
Terri Camara
