General Comment

I am very much against Andrews WCS expansion to high level radioactive waste storage. I live in Abilene, Tx and have land in Kimble County west of Junction. In Texas the prevailing winds are often west to east, and in the winter also north to south.

I believe that despite best intentions there will be eventually some kind of leakage/release of radioactive materials at best only extremely damaging to the environment and destroying land values, at worst kill people. The money advantages for one county (Andrews) does not justify Texas becoming a trash dump for dangerous materials no one else (in the U.S.) wants!
