## General Comment

Those of us that live in far west Texas don't believe our beautiful home should be burdened by this proposed nuclear fuel storage facility. I believe that 1. It should stay where it was produced, jeopardizing those who are benefiting. 2. In the 1950's the nuclear industry promised safe and almost free electricity..Like many things we were told/promised by this industry did not prove to be correct. 3. There are great and economically viable alternatives to nuclear power. 4. In the late 1960's I served aboard a nuclear submarine (SSBN 656) we were required to wear monitoring equipment 24 hours a day to record the amount of radiation the individual sailor was receiving, on occasion overdose was detected and that/those sailors were excused from further patrols or had to wait several months before returning to 'service'. Will all of the citizens within a radius of this dump wear this sort of equipment? If the people of far west Texas are consuming nuclear produced electricity then we have the burden dealing with our own waste.

As documented the common cockroach can take 100's to 1000's more radiation than the human body without dying of radiation sickness or mutation we who live in far west Texas are not laboratory experiments to see who will survive.
