General Comment

This comment is on docket numberD=NRC-2016-0231:

The physical and economic health of West Texas is tied to the land and the water- ranchers, farmers, hunters, and all the people who rely on tourism to make a living to name just a few. The health of the people and animals in this region is already under threat from oil extraction, fracking, and the current construction of two major pipelines. We cannot also support the presence, let alone the long-term storage, of high-level nuclear waste, which can easily contaminate groundwater, (of which we have precious little), the soil and the air. In spite of assurances of safety, similar facilities have had numerous leaks and accidents in the past. It is not worth the risk. We cannot allow this to happen here. Thank you.
