Subject: [External_Sender] Thank you and solutions to radiological issues

Solution

Thank you for your efforts keeping the nuclear issues in check.

I'm not a sales rep for this product. I'm someone that has been aware of its effects and applications.

Share this information to everybody dealing with toxic radiation. This is the only substance I researched that has proven accelerated nuclear transmutation.

Every storage facility should be using this material to reduce the waste and its damaging effects.

If scalar -radionic tech was used and beamed with a copy of the energetic signature of aulterra at radioactive waste it would be able to get to areas like at the fukushima plant.

If these units are shipping, a paint can be made with the aulterra powder added to it and it will help protect the environment and people as it passes through.

All the walls and the ground of the facility can be painted or dusted and a program of applying like the lockheed martin study. (see below)

In 1998, Lockheed Martin conducted another study to determine if Aulterra could neutralize radioactive elements. After six months, Aulterra successfully reduced the gamma radiation of the control substance by 80%.

As far a fukushima if they applied this material to the core areas and washed it in this would help

Here is some more information about its applications and results

Aulterra Neutralizes the Effects of Toxic Chemicals and Toxins in the Body

In several studies, it clearly shows that the energy of Aulterra neutralizes the negative effects of toxic elements. In 1996, the University of Idaho conducted toxic soil recovery studies utilizing Aulterra powder. Samples of soil contaminated with lead and zinc were mixed with small quantities of Aulterra powder. The pre-mixed soil contained 200ppm of lead and the zinc measured 26.8ppm. Two days after mixing Aulterra into the soil, the lead measured .5ppm and the zinc measured 6.5ppm.

How does Aulterra neutralize radiation and toxic metals? All particles coexist as waves and all waves coexist as particles. Another way to say it is that matter oscillates between particle and wave-form. While energy cannot be created nor destroyed, it can be influenced to change form. The subatomic particles that make up the lead and zinc also exist in waveform. Depending on the detection technology, this energy can be 'caught' in either form, rendering it harmless to DNA.

In the DNA study, it was shown that Aulterra neutralized the negative effects of copper on DNA. Although the scientific principles of intention and biological information transfer should be identical for any noxious substance, research continues to be able to confirm that **Aulterra neutralizes all heavy metals in any biological system.†**

Read [Conformational Changes In Human DNA Characterize The Radiated Energy from the Aulterra Formulation](#)

If you have any questions i would be glad to share any information i can that can be helpful for this growing radiation exposure porblem.

kind regards,
Seth
