Dear NRC and President Trump.

I understand many people believe nuclear power to be safer than other forms, like coal. My opinion is that BOTH are dangerous, overall, AND in the emissions of radiation. (Yes, there is uranium and other radioactive elements in coal). My argument is for the 'best alternative' in the event of power disruption, keeping the country 'functioning' and providing the most safety;

Wind and Solar.

With each home and business using these alternatives, rather than being 'hooked up to the grid', even if there is another 'Carrington Event' (solar flares) or a nuclear bomb detonated miles overhead (by North Korea or others, to cripple our infrastructure), we would 'mostly' still be functional AS A NATION... with wind and solar powered services still 'mostly' operational. It just makes more sense. There is also no 'waste' to bury, spill or poison the population.

You already know why you have so much opposition to hazardous waste landfills; they leak, there are mistakes, there are earth changes like earthquakes, flooding, tornadoes, hurricanes...that put landfills and those living near them, at risk. Be smart...not greedy.

Thank you for your considerations, NRC and President Trump.
