

May 29, 1980

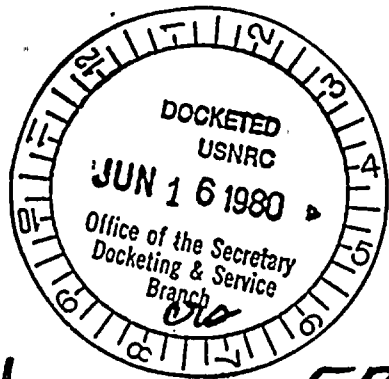

Chairman Ahearne:

The earthquake of May 28, 1980 was a clear indication that the Hosgre Fault near the Diablo Canyon Nuclear Facility is active.

The fortunate thing was that the magnitude of the quake was relatively small and nothing unfortunate occurred. However, the mere fact that the fault is active and an earthquake of very great magnitude is highly possible, only confirms my feelings that licensing of this facility would be criminally irresponsible.

I urge you to use your office to vote against the licensing of the Diablo Nuclear Facility. Thank you!
with deepest concern,

Nancy Carol 503 5/10
