Nuclear Regulatory Commission
Chairman Ahearne
1717 H St, NW
Washington, D.C. 20555

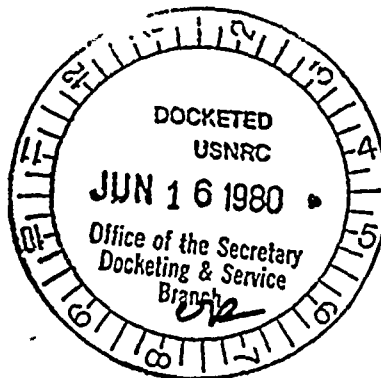

Dear Mr. Ahearne,

I am taking the time to write this note because the safety of nuclear power is so critical to the health of our nation. It is now several days after the Hosgri fault earthquake. In the absence of any agreed upon data regarding the seismic safety of the Diablo Canyon nuclear plant, it seems prudent to reopen the seismic hearings before granting a license to operate the plant. It is well known that the plant was not designed to bear the force of an earthquake the magnitude the Hosgri fault is probably capable of creating. Licensing the plant to operate seems foolhardy at this point.

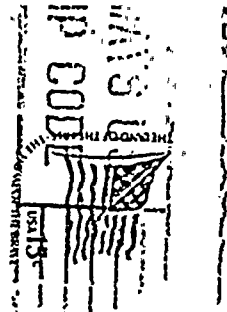

Sincerely,

Anthony A. Allina MD
