Re: Docket No. 50-275  
Docket No. 50-323  
Diablo Canyon Units 1 and 2

Dear Mr. Miraglia:

This letter is to inform you of a planned temporary shutdown of the basic seismic instrumentation system at the Diablo Canyon site. The shutdown is required to enable PG&E to install panels for the Post-Accident Monitoring System in the control room.

In order to make this modification, the control room-mounted central recorder of the basic seismic instrumentation system must be permanently relocated within the control room. This equipment will be out of service for a period of two weeks to allow rerouting of cables. During the time that the basic system is being relocated, the supplemental seismic instrumentation system will continue in service. The supplemental system is a 58-channel digital system with a sensitivity capable of recording accelerations down to 0.001g.

The temporary shutdown of the basic system is expected to begin during the week of November 17, 1980. Mr. B. Buckley of your staff was notified of this plan by telephone on October 29, 1980.

Very truly yours,

*Philip A. Crane, Jr.*
