Re: Docket No. 50-275
Docket No. 50-323
Diablo Canyon Units 1 & 2

Dear Mr. Miraglia:

Attached is the current status of the Westinghouse review of PGandE's low power test program, power ascension procedures, and emergency procedures. This addresses Task Action Plan Item I.C.7.

Very truly yours,

Philip A. Crane

NSSS VENDOR REVIEW OF TEST PROCEDURES (I.C.7)

Low Power Testing

In its letter of November 26, 1980 Westinghouse provided its review of the procedures for the Special Low Power Test Program. The Westinghouse review has incorporated their experience from the North Anna Unit 2, Sequoyah Unit 1, and the Salem Unit 2 Special Low Power Test Programs. The low power startup test procedures have been reviewed by PGandE and sent to Westinghouse for their review as required by Task Action Plan Item I.C.7. Their review will be completed and documented prior to startup.

Power Ascension Tests and Emergency Procedures

PGandE is reviewing its Diablo Canyon Power Plant power ascension tests and will send the procedures for these tests to Westinghouse by May 4, 1981. The Westinghouse review will be completed prior to operation above 5 percent of full power.

Westinghouse has reviewed the applicable Diablo Canyon Power Plant Emergency Operating Procedures and has found them to be acceptable based on guidelines presented in the Westinghouse reference instructions. Included in our January 1981 submittal is a letter from the Westinghouse Project Manager for Diablo Canyon listing the Emergency Operating Procedures reviewed and indicating the acceptability of these procedures.

A review of selected Emergency Operating Procedures was made by the NRC Division of Human Factors Safety, and a subsequent walk-through of these procedures both at the Zion simulator and at the Diablo Canyon Power Plant indicated these procedures are acceptable to the NRC. Additional detail relating to the evaluation of these procedures is provided in Section I.C.8 of the January 26, 1981 submittal. Westinghouse will have reviewed changes made and comments will have been resolved prior to operation above 5 percent of full power.
