Re: Docket No. 50-275
Docket No. 50-323
Diablo Canyon Units 1 and 2

Subject: IE Bulletin 80-15 - Possible Loss of Emergency Notification System (ENS) with Loss of Off-Site Power

Dear Mr. Engelken:

This letter is a supplemental report submitted to update the response to IE Bulletin 80-15 under the provisions of 10 CFR 50.54(f) as requested. Items addressed in IE Bulletin 80-15 and PGandE's response to each are:

Action Item 1. Within 10 days of the date of this bulletin, verify by direct inspection, in conjunction with the appropriate telephone company representative, that the Emergency Notification System at your facility is powered in the manner described in the two enclosures.

Response: Inspection verified that the ENS is powered in the manner described in Enclosure 2 to the bulletin.

Action Item 2. Those facilities which have station packages requiring on-site power, but which are not connected to a safeguards instrumentation bus which is backed up by batteries and an inverter or equally reliable power supply, shall make necessary modifications and provide such a connection.

AO/I
5-2

8 104240245

81-52

Response: The loss of off-site power at Diablo Canyon will not cause loss of power to the ENS. The ENS is connected to an inverter which is powered from a safeguard bus and is backed up by the station battery. No modifications were made at the Information Center Unit since it will be relocated to the Emergency Off-Site Facility which has diesel backup power.

Action Item 3. All facilities are to develop and conduct a test, within 60 days of the issuance of this bulletin, to verify that all extensions of the ENS located at your facility(ies) would remain fully operable from the facility(ies) to the NRC Operations Center in the event of a loss of off-site power to your facility(ies). This is not intended to mean that an actual loss of off-site power be executed.

Response: This test was conducted on March 12, 1981, and verified that all extensions of the ENS located at the Diablo Canyon Power Plant will remain fully operable from the Diablo Canyon Power Plant to the NRC Operations Center in the event of a loss of off-site power.

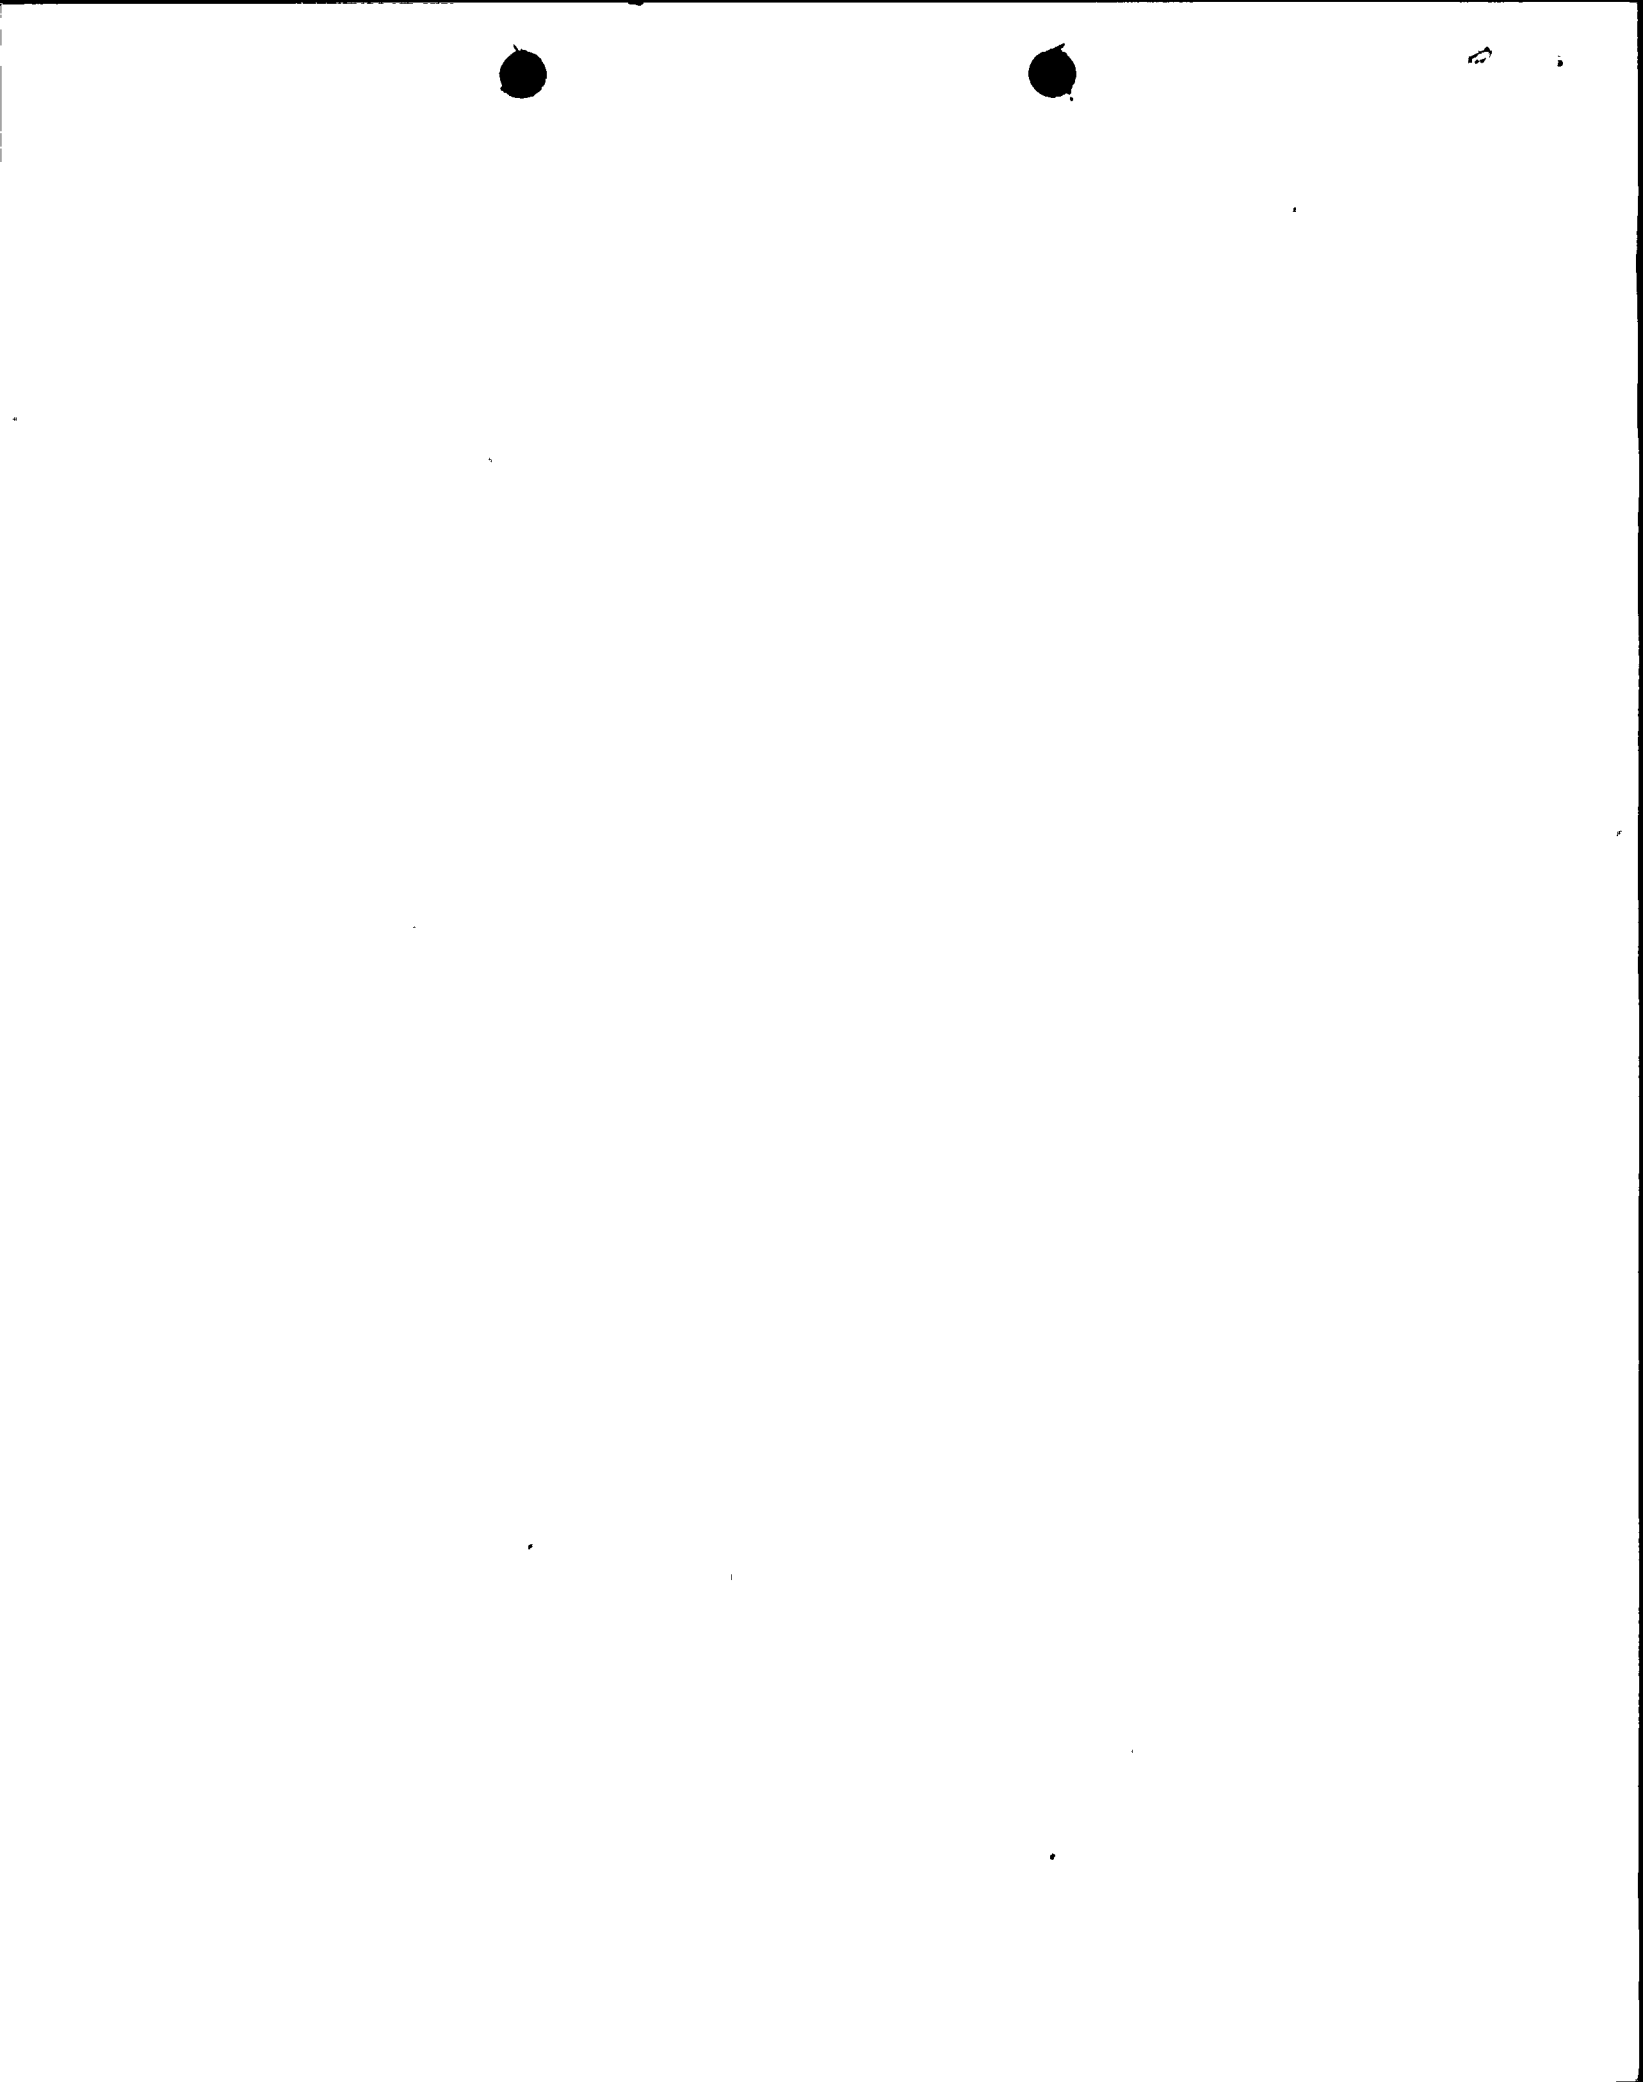

Action Item 4. If it is determined that a station package requiring on-site power is not connected to a safeguards instrumentation bus backed up by automatic transfer to batteries and an inverter or an equally reliable power supply, notify the NRC Operations Center via the ENS within 24 hours after such determination.

Response: Reliable backup power does exist.

Action Item 5. Prepare and issue an administrative procedure or directive which requires notification to the NRC Operations Center by commercial telephone or relayed message within one hour of the time that one or more extensions of the ENS located at your facility(ies) is subsequently found to be inoperable for any reason.

Response: Administrative Procedure NPAP C-12 (Revision 2), paragraph 4.g, has been revised to incorporate the notification requirement of Action Item 5 prior to fuel loading.

Action Item 6. Provide a written report describing the result of the reviews required by Items 1 and 2 above, the results of the testing required by Item 3 and the procedures required by Item 5.

Mr. R. H. Engelken

-3-

April 10, 1981

Response: This letter is the written report describing PGandE's action on the five items listed in IE Bulletin 80-15.

Very truly yours,

Philip A. Grano, J

CC: Director
Office of Inspection and Enforcement
U. S. Nuclear Regulatory Commission
Washington, DC 20555

Service List

JAMES O. SCHUYLER, being duly sworn, states that
(i) he is a Vice President of Pacific Gas and Electric Company,
(ii) he is authorized on the part of said Company to sign and
file with the Nuclear Regulatory Commission this submittal,
and (iii) all statements and matters set forth therein are
true and correct to the best of his knowledge.

James O. Schuyler

James O. Schuyler, Vice President, Nuclear Power Generation
Pacific Gas and Electric Company
