

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

March 10, 1981

MEMORANDUM FOR: John Dickey, Director
Radiological Emergency Preparedness Division
Office of Population Preparedness
FEMA

FROM: Brian K. Grimes, Director
Division of Emergency Preparedness
Office of Inspection & Enforcement

SUBJECT: FEMA SUPPORT FOR NRC LICENSING OF NUCLEAR PLANTS

By separate memorandum for individual nuclear power plants, I have asked that FEMA provide the NRC with findings and determinations as to whether the State and local emergency plans that support a particular nuclear plant are adequate and capable of implementation. These previous memoranda have addressed the Farley, McGuire, Salem and San Onofre facilities.

To assist you in scheduling your support for the NRC licensing procedures we have developed priorities (Enclosure 1) for the facilities that are scheduled for licensing consideration of the NRC in the coming months. The dates indicated for our receipt of FEMA's findings and determinations are based on the current licensing schedules and should allow time for NRC to publish its findings in accordance with the regulations (10 CFR 50.47) on the overall state of emergency preparedness. If changes in priority occur, I will provide you with an updated listing.

If there is a need for additional FEMA assistance, a request will be made by a separate memorandum, specific to a particular nuclear plant. This assistance could include providing testimony and/or witnesses before the Commission, the NRC Advisory Committee on Reactor Safeguards, NRC hearing boards and administrative law judges, any court actions, and during any related discovery proceedings.

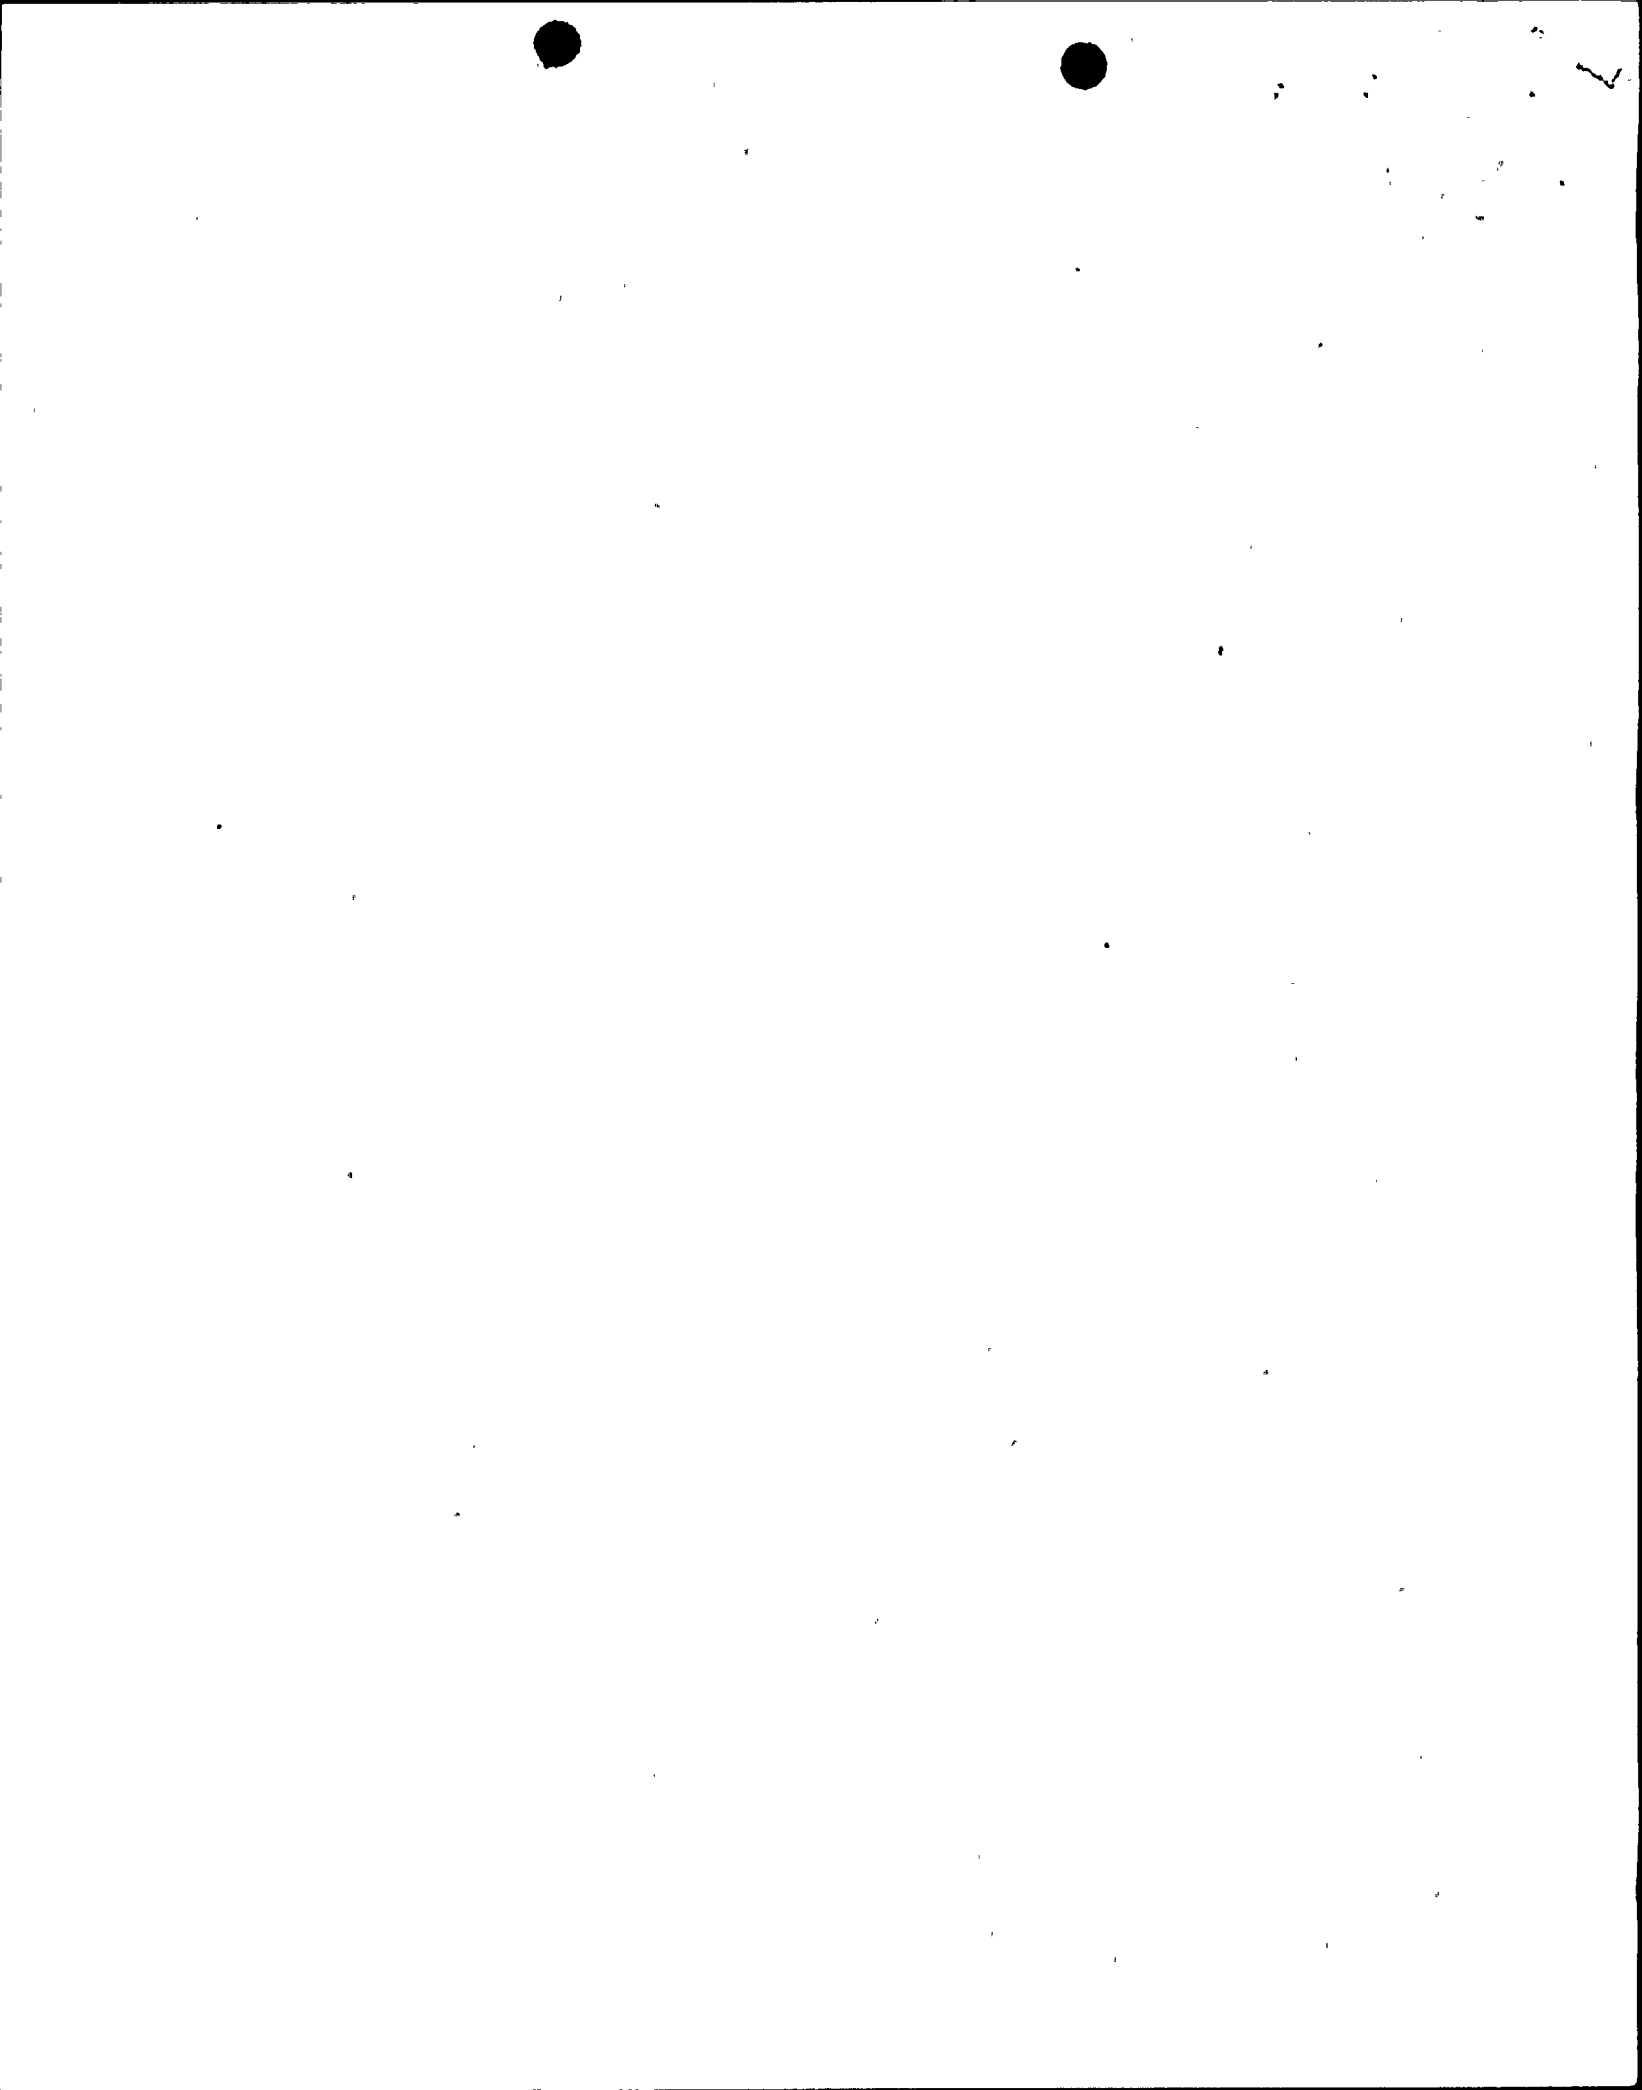

Receipt of FEMA findings after the dates indicated may result in offsite emergency preparedness being on the critical path for licensing decisions. I would appreciate your endorsement of these dates in the next week. If it is not possible for FEMA to meet this schedule, please provide me with an alternate schedule.
