RE: Renewal of Fermi 2 license +  
Licensing of Fermi 3 plant in Monroe  
Michigan

Please do not subject us to the very risky  
dangers of Fermi II + III "accidents." There are  
the same design as the failed Fukushima plant.  
There's no waste disposal that will be safe for  
the over 100,000 years it remains radioactive.  
Work on developing safe storage of radioactive  
waste. Only when that's in place, operate  
these plants. All metro Detroit is in 50-mile radius.
