REGULATORY SERVICES

Dear Mr. Stolz:

Attached are 40 copies of additional information on the subject of steam generator asymmetric pressure. This supplements the information provided the Staff in our letter dated February 14, 1978 regarding the effects of a postulated steam line break, postulated reactor coolant loop break, and postulated pipe break in the pressurizer compartment.

The additional information is in regard to the effects of the postulated break in the reactor coolant loop piping as discussed in the April 12, 1978 meeting between NRC and Westinghouse. This should complete our response to all NRC requests on the subject of asymmetric pressurization.

Five copies of this submittal have been sent directly to Mr. Dennis Allison.

Kindly acknowledge receipt of the above material on the enclosed copy of this letter and return it to me in the enclosed addressed envelope.

Very truly yours,

Philip A. Brown, Jr.
