Main Office Inspection Next Inspection Date: March 21, 2022

Field Office Inspection _____

Temporary Job Site Inspection _____

PROGRAM SCOPE

This was a routine, unannounced inspection of an agricultural chemical processing plant. The licensee was authorized to possess and use fixed gauges for density level measurements. Two individuals were involved with the use and oversight of four fixed gauges used at the facility. The licensee did not perform and service or maintenance on the gauges; these services were performed by the manufacturer when required.

The inspector toured the facility and verified the location of the four gauges listed in the licensee's inventory. Licensee personnel demonstrated the lock out procedure for one of the gauges in service and explained leak test procedure to the inspector. Interviews conducted with other licensee staff indicated that the RSO must be contacted prior to working on equipment near the gauges.

The inspector reviewed pertinent documents including leak test records, shutter test records, and inventories with no issues noted.

No violations were identified during this inspection.
