Subject: [External_Sender] 1122 Rev 3 comment

David Muller,

I was involved with the 1998 update of 1122. It is not clear why the lists of tasks have been removed from the Systems K/As. As a result of the NUREG-0737, Supplement 1 task analyses, the operators tasks and information and control requirements were identified and formed the bases for certifying control room designs. I suggest retaining the list of tasks for regulatory continuity.

My impression of the Rev. 3 changes are reasonable reasonable. If you have any "historical" questions don't hesitate ask.

Regards, Joseph DeBor (Senior Nuclear Power Plant Human Factors Specialist).
