Dear Sirs:

We who are "down wind" from the T.M.I. accident resent any and all released of Radio-active waste into the atmosphere. Our group is forming in this area to educate people to the dangers of Plutonium and other By-Products. Knowing these wastes take many, many years to break down in nature.

We favor instead a halt to further construction of the Plant being built in Berwick, Pa. which is even closer. I suggest personally you read Elin Caldwell's Views on Nuclear Waste, (she's a pediatrician in Boston) you will be stunned to awakening. Remember; what's colorless, odorless, and tasteless, and is toxic for 240,000 years? That's High-RADIO-ACTIVE Waste.

I want my kids to inherit a safe life to live, don't you?

Concerned
