Re: Susquehanna Steam Electric Station
Allegations Made at Pre-Hearing Conference
ER 100450 PLA 470 File 900

Docket No. 50-387
50-388

Dear Mr. Grier,

Reference my letter to you of June 25, 1979, same subject, and your reply of July 18, 1979. Our investigations of the 139 items mentioned in my previous letter have been completed. While no reportable items under 10CFR 50.55E or 21 were identified, several previously unknown craft concerns were surfaced for management action.

Although these investigations required the dedication of considerable manhours by key project supervisors and generated an extensive volume of correspondence, my assessment is that our Craft Survey Program was definitely worthwhile. This program opened a new channel of communications, one in which craft persons could, and did, freely state their concerns without fear of recrimination. I believe this point is particularly important since many craft people are reluctant to formally, and directly, confront management with their concerns. Having gained the confidence of our craft people by our sensitive and confidential treatment of their responses, I think we can depend on the continued willingness of our craft people to bring their concerns to our attention.

Findings and actions taken with regard to each item investigated are available both at our construction site and at our general office in Allentown. We are fully willing to share the results of these investigations with you or your resident inspector should you indicate such a desire.

Very truly yours,

N. W. Curtis
