PLA-1081

Docket Nos. 50-387
50-388

Dear Mr. Schwencer:

In May, 1981, we described our plans for providing improved emergency facilities at our Susquehanna plant in response to NRC guidance in NUREG-0696. Since that time, we have proceeded to develop purchase specifications for these facilities, choose vendors and proceed with fabrication and installation of the new equipment as soon as possible. Our target was to meet your generic deadline with either a permanent system or an interim approach which was described to you and approved by you.

We have been generally successful in this approach; however, the Safety Parameter Display System has fallen behind your deadline. Due to the difficulties in designing this system, it will not be delivered by October, 1982. We are currently re-evaluating the schedule, in conjunction with the vendor, and will inform you of the new schedule when it is available. We believe completion of this system will be in the second or third quarter of 1983.

In the meantime, we propose to continue the interim arrangements described in the Emergency Plan, reviewed by the staff, and accepted in the SER as adequate for licensing.

In previous correspondence, we stated the integrated Emergency Response Computer System, which will meet all your information and data display requirements, will be operational by July 1, 1984. We will be unable to meet this date.

ER 100450 File 841-2
Mr. A. Schwencer

Because of the need to install portions of this system during an outage, this system will not be functional until the startup following the first refueling outage, currently expected in the fourth quarter of 1984.

If you have any questions on this information, please call W. E. Barberich.

Very truly yours,

N. W. Curtis
Vice President-Engineering & Construction-Nuclear
