Docket No. 50-387

Dear Mr. Schwencer:

This letter provides the current status of emergency support facilities at Susquehanna SES. The emergency operations facility and technical support center will be operational by October 1, 1982. The interim emergency response computer system, will be fully operational no later than the end of this year and may be available as early as November 15, 1982 depending on delivery and installation of hardware items. The unavailability of the interim emergency response computer does not compromise our ability to respond to an emergency at Susquehanna SES.

Very truly yours,

N. W. Curtis
Vice President-Engineering & Construction-Nuclear

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that this is essential for ensuring the integrity of the financial system and for providing a clear audit trail.

2. The second part of the document outlines the various methods used to collect and analyze data. It describes how different types of information are gathered and how they are processed to identify trends and anomalies.

3. The third part of the document focuses on the role of technology in modern data analysis. It highlights the use of advanced software tools and the importance of staying up-to-date with the latest technological developments.

4. The fourth part of the document discusses the challenges faced in the field of data analysis. It addresses issues such as data quality, privacy concerns, and the need for skilled personnel to manage and interpret the data.

5. The fifth part of the document provides a summary of the key findings and conclusions. It reiterates the importance of a systematic and transparent approach to data analysis and offers recommendations for future research and practice.
