PLA-1407

Docket No. 50-387

Dear Mr. Schwencer:

In PLA-1296 (dated September 16, 1982), PP&L proposed to implement several improvements in the plant security system. One of these, concerning Information Retrieval, is complete. Another, concerning Vital Area Portal Hardware, is no longer necessary. Other measures which have been taken to upgrade the Susquehanna SES Security System performance have rendered this modification unnecessary. These doors are operating as required. The previously identified problems are no longer being experienced, and compensatory measures have not been necessary. Should future conditions warrant, compensatory measures would be resumed, and the need for this modification would be reconsidered.

This letter does not contain Safeguards Information and may be placed in the public document room.

Very truly yours,

N.W. Curtis
Vice President-Engineering & Construction-Nuclear
