SUSQUEHANNA STEAM ELECTRIC STATION
SAFEGUARDS INFORMATION PROGRAM
ER 100450 FILE 841-2
PLA-1473

Docket No. 50-387
50-388

Reference: letter dated 5/25/82, Curtis to Robertson (PLA-1103)

The above referenced letter informed the NRC of PP&L's plans to use certain security containers for the storage of Safeguards Information which satisfy the requirements of 10CFR73.21. The purpose of this letter is to expand our Safeguards Information Program to allow storage of Safeguards Information in security storage containers in accordance with 10CFR73.21(d), in another PP&L annex and at the Susquehanna Steam Electric Station.

In later January 1983, personnel and records from our Nuclear Department will be transferred from their present General Office location to another annex in Allentown, PA in close proximity to the PP&L General Offices. Included in that transfer will be numerous records designated as Safeguards Information. Within the new annex, records, correspondence, drawings and other materials, including Safeguards Information will be stored in a security storage area within the Nuclear Administration Section. The security storage area is constructed of concrete on the floor, ceiling and three walls, and wallboard on the fourth wall. Access to this area will be through either of two steel doors. Each of these doors will be secured with a GSA-approved dial combination lock. There are no other means of access to the area. Access to the vault will be controlled by the Nuclear Administration Section. Additionally, the annex has numerous key clock stations, both inside and out, that are checked frequently after normal working hours by a contract guard service. Included are a key station within the Nuclear Administration Section, and one on a wall just outside the security storage area. Attachment 1 is a schematic drawing of the second floor of the annex within which the security storage area is located.

Boo!

Director, Office of Nuclear
Reactor Regulation

PP&L also plans to store Safeguards Information in the records vault located on the second floor of the North Gatehouse at the Susquehanna Steam Electric Station. The vault is constructed of concrete block, with ingress and egress through a single steel, bullet-resistant door. There are no other means of access. Access to the vault is controlled by the Supervisor-Security-SSES or designated security staff members whom are physically situated immediately outside the vault. The security offices, and the vault are located within the protected area perimeter of the Susquehanna Steam Electric Station and are locked at the end of the normal work day. During other than normal working hours, these areas are periodically checked by the Security-Shift-Supervisor or his staff. Attachment 2 is a schematic drawing showing the location of the vault and the security offices within the Susquehanna SES North Gatehouses.

Since the move of personnel and records from our Nuclear Department to the new annex is scheduled for approximately January 24, 1983, we would appreciate your review and comments regarding the use of the areas described above for the storage of Safeguards Information at your earliest convenience.

Very truly yours,

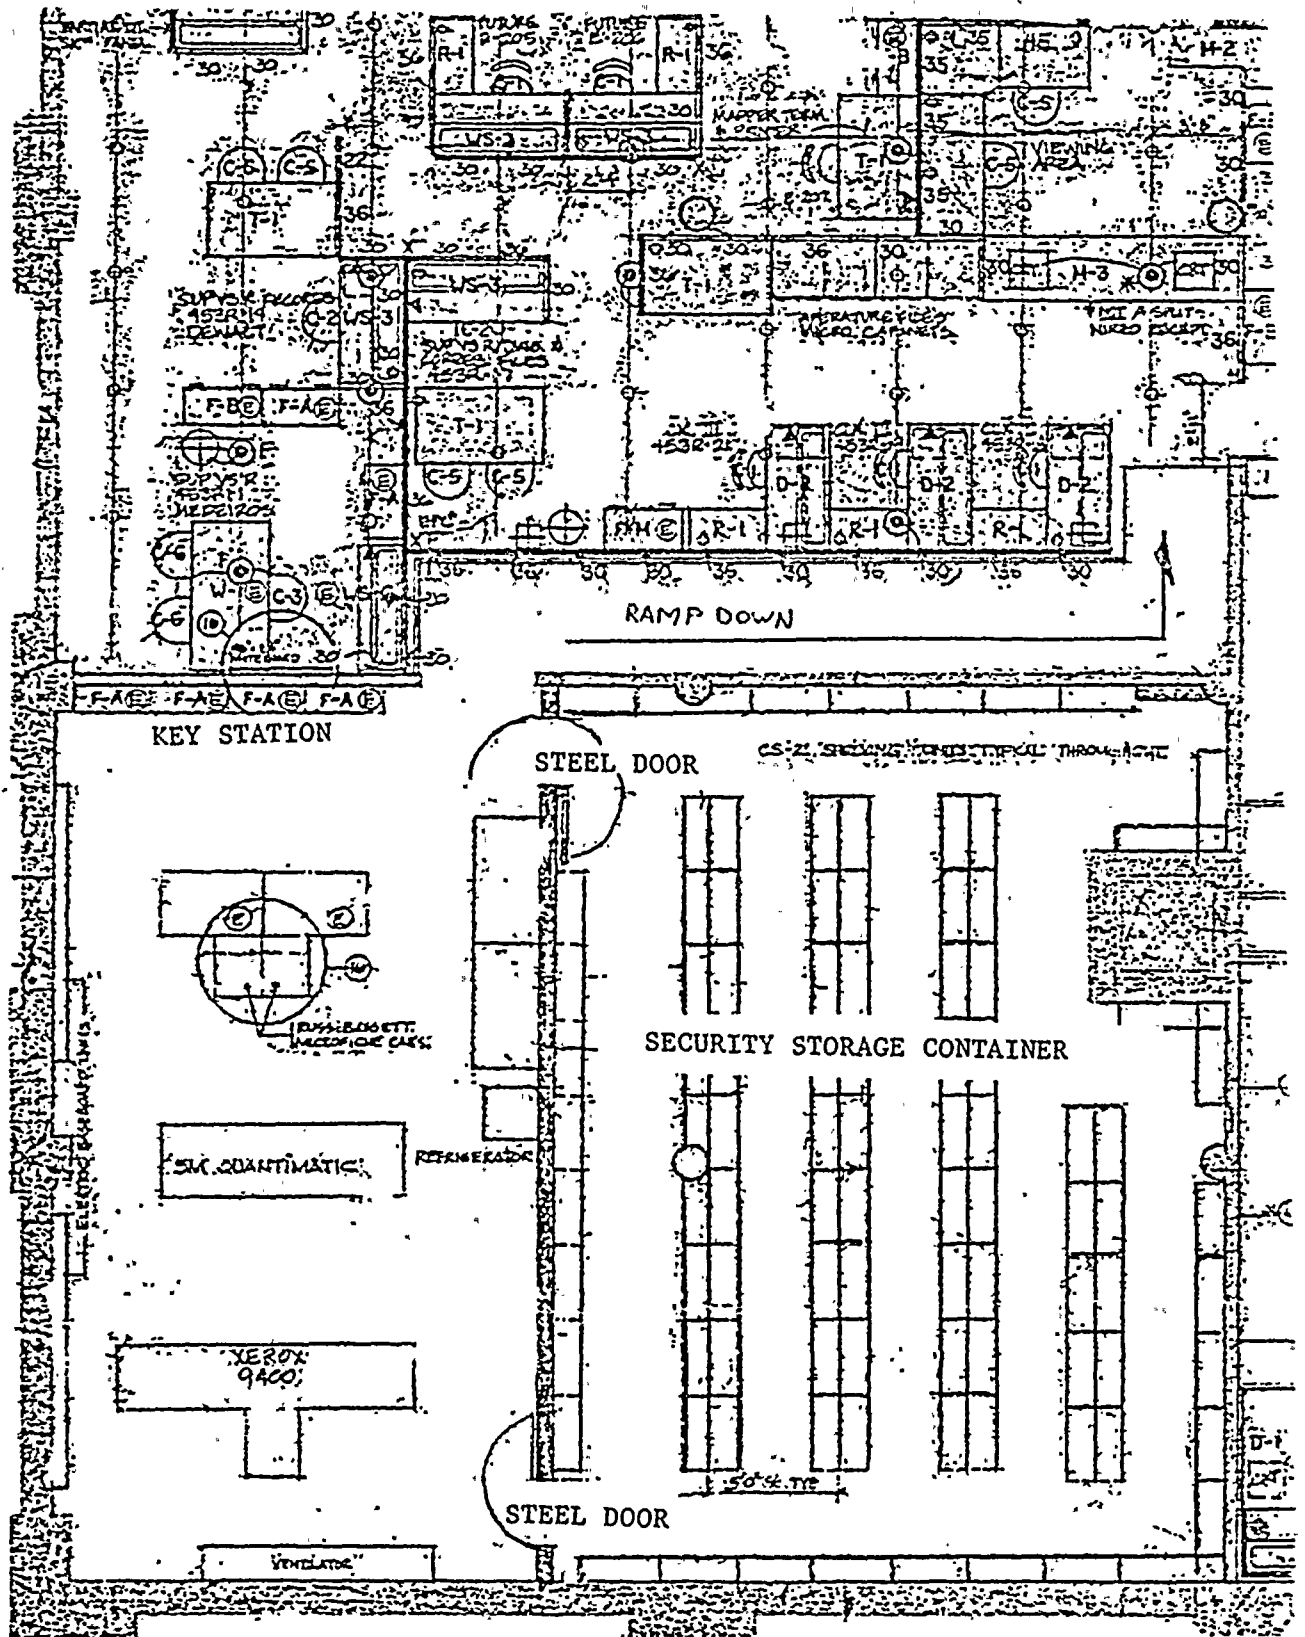

N. W. Curtis
Vice President-Engineering & Construction-Nuclear
