1. The first part of the report is a general introduction to the subject of the investigation. It deals with the scope and objectives of the study, and the methods used to collect and analyze the data.

2. The second part of the report is a detailed description of the experimental procedures. This section includes a description of the apparatus used, the conditions of the experiment, and the methods used to measure the various quantities of interest.

3. The third part of the report is a discussion of the results of the experiment. This section compares the experimental results with the theoretical predictions, and discusses the sources of error and the implications of the findings.

4. The fourth part of the report is a conclusion and a list of references. The conclusion summarizes the main findings of the study, and the references list the sources of information used in the report.

SUSQUEHANNA STEAM ELECTRIC STATION
REQUEST FOR SPDS SCHEDULE EXTENSION
ER 100450 FILE 896
PLA-1966

Docket Nos. 50-387
50-388

Dear Mr. Schwencer:

As discussed with your staff, this letter requests an extension of the completion date for the Safety Parameter Display System (SPDS) to January 31, 1984. A close examination of remaining activities involved with completing the system indicates that achieving the scheduled operational date of December 30, 1983 as stated in our response to Generic Letter 82-33 may be in jeopardy. Recent developments have caused delays in starting the tie-in outage for Unit 1/Unit 2. Since certain work necessary to complete the SPDS can only be accomplished during this outage the work schedule for completing SPDS has had to be modified.

An operational date of January 31, 1984 for SPDS does not reduce our ability to deal with an emergency. Our reasons for this position remain essentially the same as those provided in PLA-1717 dated June 23, 1983.

Should you have any question regarding this request, please call.

Very truly yours,

N. W. Curtis
Vice President-Engineering & Construction-Nuclear
