Docket Nos. 50-387  
and 50-388

Dear Mr. Saltzman:

As required by 10CFR50.54(w)(4) the following information represents the present level of onsite property damage insurance for SSES:

<u>Primary</u>		
MAERP Policy #N-305/ANI Policy #1693		\$500 million
<u>Excess</u>		
MAERP Policy #XN-319/ANI Policy #X8417		\$ 85 million
NEIL II Policy #X83-051		\$435 million

Very truly yours,

N. W. Curtis  
Vice President-Engineering & Construction-Nuclear

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by proper documentation and that the books should be kept up-to-date at all times.

In the second section, the author details the various methods used to collect and analyze data. This includes the use of standardized forms, regular audits, and the application of statistical techniques to identify trends and anomalies.

The third part of the report focuses on the implementation of internal controls. It describes how these controls are designed to prevent errors and fraud, and how they are monitored and evaluated for effectiveness.

The final section of the document provides a summary of the findings and conclusions. It highlights the key areas where improvements are needed and offers recommendations for future actions. The author concludes that a strong system of internal controls is essential for the success of any organization.

The following table provides a detailed breakdown of the data collected during the study. It shows the distribution of transactions across different categories and over time.

The data indicates that there is a significant increase in transactions during the peak periods of the year. This suggests that the organization's operations are highly seasonal. The analysis also shows that there are several areas where the current controls are not fully effective, and these need to be addressed.
