SUSQUEHANNA STEAM ELECTRIC STATION
NOTIFICATION OF UNIT 2 CONSTRUCTION COMPLETION
ER 100508 FILE 841
PLA-2085

Docket No. 50-388

Dear Mr. Denton:

As has been the practice for operating license applicants, the purpose of this letter is to provide NRC with notification of construction completion and assurance that the plant conforms with the design intent and regulatory requirements. Since construction of Susquehanna Steam Electric Station, Unit 2, is substantially complete, we provide the following as assurance that its design has been implemented as intended.

A comprehensive quality assurance program has been in place throughout the life of the project. PP&L's program was developed to provide the means of controlling the design and construction process. This program meets or exceeds the requirements of 10CFR50, Appendix B. Throughout the design process, the QA programs of PP&L and our contractors have verified that quality standards and control measures have been met.

PP&L has not allowed its contractors to function without PP&L participation. We have been extensively involved in their activities and have established strong interfaces with the AE/constructor and NSSS vendor for both home office and field activities. PP&L has an engineering organization of over 100 professionals with about 500 person years of nuclear experience to oversee the activities of our contractors. We are determined to remain involved, to participate in the decision process for specifying designs and equipment, to monitor installation practices and to be accountable for the quality of the final product. We believe that personal involvement by our managers and engineers is the key to final quality, and we continually emphasize that point throughout our organization.

The PP&L QA program has been supplemented and tested by several independent third party reviews which provide further assurances. These reviews have provided valuable insight into the effectiveness of design control measures and the QA program. Our normal process and these reviews were described previously in letters PLA-1074, PLA-1557 and PLA-1609.

SSES: PLA-2085
ER 100508 File 841
Mr. Harold R. Denton

The excellent performance of Susquehanna Steam Electric Station Unit 1 since operation began is evidence that the design was adequate and properly implemented. We have encountered no significant problem with respect to the design and construction of Unit 1. Since Unit 2 was designed essentially at the same time as Unit 1, utilizing many of the same people, and incorporating the lessons learned, we believe Unit 2 will perform as well or better.

I am reasonably confident that our program of design control and verification has been effective and has produced a plant whereby the design and construction are in conformance with the regulatory requirements and our commitments contained in the FSAR and supplementary correspondence.

Very truly yours,

N. W. Curtis
Vice President-Engineering & Construction-Nuclear
