Docket Nos. 50-387
50-388

Dear Mr. Novak:

Pennsylvania Power & Light Company is in the process of designing and constructing a fifth diesel generator for the Susquehanna plant. The purpose of this modification is to enhance the reliability of the on-site AC power supplies and reduce our exposure to shutdowns caused by D-G problems. The project has progressed to a point where a discussion with you and your staff is appropriate.

In this discussion we would present a description of the project and its schedule and discuss the operational modes of the fifth diesel. In addition, we want to discuss the possibility of a technical specification LCO extension to allow completion of this project without requiring two unit shutdown.

We request that this meeting take place in early July, if that is agreeable to you. If you have any questions, please call.

Very truly yours,

N. W. Curtis
Vice President-Engineering & Construction-Nuclear
