**LICENSEE:**

The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

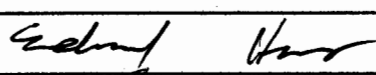

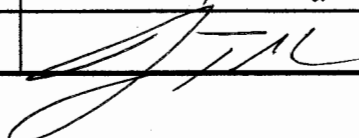

- 1. Based on the inspection findings, no violations were identified.
- 2. Previous violation(s) closed.
- 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy, to exercise discretion, were satisfied.

Non-cited violation(s) were discussed involving the following requirement(s):

- 4. During this inspection, certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited in accordance with NRC Enforcement Policy. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11.  
(Violations and Corrective Actions)

**Statement of Corrective Actions**

I hereby state that, within 30 days, the actions described by me to the Inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.

Main Office Inspection      Next Inspection Date: May 2, 2022

Field Office Inspection \_\_\_\_\_

Temporary Job Site Inspection \_\_\_\_\_

**PROGRAM SCOPE**

This was a routine, unannounced inspection of a commercial roofing contractor authorized to possess and use portable gauges at their main office location in Grand Rapids, Michigan, and at temporary job sites within NRC jurisdiction. The licensee employed one authorized gauge operator and possessed two Troxler Model 3216 portable gauges.

The gauges were not in use at the time of the inspection. The inspector observed the authorized gauge operator demonstrate adequate security of the portable gauge both in storage and transit. The shipping papers for the gauge included all of the required information and were accessible to the driver during transport. In addition, the operator demonstrated adequate knowledge of radiation safety principles and emergency procedures in the event of an incident through interviews with the inspector.

The inspector reviewed pertinent documents including leak test records, manufacturer training certificates, HAZMAT training records, dosimetry records, shipping papers, and the utilization log with no issues noted. In addition, the inspector performed independent surveys, which revealed no readings that would indicate residual contamination or exposures to members of the public in excess of regulatory limits.

The inspector verified that corrective actions were implemented for two violations that were identified during the previous inspection regarding the licensee's failure to leak test the gauges at a 12 month frequency and maintain the records for at least three years.

No violations were identified during this inspection and two previous violations were closed.
