SUSQUEHANNA STEAM ELECTRIC STATION
IST RELIEF REQUEST
PLA-2797 FILE R41-2

Docket No. 50-387

Dear Ms. Adensam:

Attached is a request for one time relief from performing a LLRT on Valve 1F004 as required by our existing Inservice Testing Program for Susquehanna SES Unit 1.

If you have any questions, please contact us.

Very truly yours,

H. W. Keiser
Vice President-Nuclear Operations

Some words are barely discernible, but the overall structure suggests a formal or semi-formal communication.]

RELIEF REQUEST

System: Reactor Water Cleanup (RWCU)
P&ID: M-144
Valve: HV-1F004
Category: A
Class: 2
Function: Containment Isolation

Impractical Test Requirement:

Type C Local Leak Rate test to satisfy post-maintenance operational readiness requirements pursuant to IWV-3000.

Basis for Relief:

Maintenance necessary to functionally restore the valve can be accomplished with the unit operating but LLRT implementation requires the unit to be shutdown. The local leak test to verify the containment isolation function requires that the RWCU System be out-of-service and a 49.5 psig hydrostatic leakage test be performed. This requires the unit to be in condition 4 (cold shutdown).

Alternative Testing:

Prior to the valve maintenance, a special test will be performed to evaluate water leakage into a defined system test boundary through the 1F004 valve. Following completion of maintenance, the same test will be performed. The two tests will allow a qualitative assessment of the pre and post-work leakage from that boundary. The Type C LLRT will be performed at the first available outage of sufficient duration which necessitates containment entry.
