Docket Nos. 50-387  
and 50-388

Dear Dr. Butler:

The purpose of this letter is to propose changes of an administrative nature to the Susquehanna SES Units 1 and 2 Technical Specifications.

DESCRIPTION OF CHANGES

The following changes, illustrated in attached marked-up pages, are proposed:

- o Unit 1, page 3/4 3-20: In footnote "#", change "TSH-G33-N600" to "TSH-G33-1N600", and "TSH-G33-N602" to "TDSH-G33-1N602".
- o Unit 2, page 3/4 3-20: In footnote "#", change "TSH-G33-N600" to "TSH-G33-2N600", and "TSH-G33-N602" to "TDSH-G33-2N602".
- o Unit 1, page 3/4 7-21: Change 3.7.6.3k from "C-412" to "C-413".
- o Unit 1, page 3/4 8-17: Delete 3.8.3.1a.2.c and 3.8.3.1b (including footnote "\*").
- o Units 1 & 2, page 6-3: Delete "Manager-Nuclear Licensing" from Figure 6.2.1-1.
- o Unit 2, page 3/4 6-10: Revise elevations and azimuths as shown on the attached marked-up page.

NO SIGNIFICANT HAZARDS CONSIDERATIONS

The following three questions are addressed below for each of the proposed changes:

8712230073	871218

ADD  
1/1

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in financial reporting.

2. The second part of the document outlines the various methods and techniques used to collect and analyze data. It covers both qualitative and quantitative research approaches.

3. The third part of the document focuses on the ethical considerations and standards that must be followed during the research process. It highlights the importance of informed consent and the protection of participants' privacy.

4. The fourth part of the document discusses the challenges and limitations of research in this field. It addresses issues such as data reliability, sampling bias, and the complexity of human behavior.

5. The final part of the document provides a summary of the key findings and conclusions. It offers insights into the implications of the research for future studies and practical applications.

- I. Does the proposed change involve a significant increase in the probability or consequences of an accident previously evaluated?
- II. Does the proposed change create the possibility of a new or different kind of accident from any accident previously evaluated?
- III. Does the proposed change involve a significant reduction in a margin of safety?

o Units 1 & 2, page 3/4 3-20

- I. No. This information is provided based on a review of the pertinent design drawings. No functional change to these instruments or the associated trip system has occurred. Therefore the change is entirely administrative in nature.
- II. No. See I above.
- III. No. See I above.

o Unit 1, page 3/4 7-21

- I. No. This information is provided based on a review of the pertinent design drawings. C-412 is a Unit 2 designated area and appears in the corresponding section of the Unit 2 Technical Specifications. No missed surveillances occurred due to this error. Based on the above, this change is entirely administrative in nature.
- II. No. See I above.
- III. No. See I above.

o Unit 1, page 3/4 8-17

- I. No. The deleted information is redundant to information provided on page 3/4 8-17a, which is also attached for information. NRC made this error when they issued Amendment 55; therefore this change is entirely administrative in nature.
- II. No. See I above.
- III. No. See I above.

o Unit 1 & 2, page 6-3

- I. No. The deletion of the Manager-Nuclear Licensing title reflects PP&L's current organization. This function has not been dropped, but merely realigned to report through the Manager-Nuclear Support to the Vice-President Nuclear Operations. This change has no impact on safety and is entirely administrative in nature.
- II. No. See I above
- III. No. See I above.

[The body of the document contains several paragraphs of extremely faint and illegible text. The text is scattered across the page and is difficult to decipher due to low contrast and blurring. Some faint words and symbols are visible but cannot be accurately transcribed.]

o Unit 2, page 3/4 6-10

I. No. This information is provided based on a review of the pertinent design drawings. None of the associated instruments have been relocated. Errors apparently occurred in the original development of this information and resulted in one incorrect elevation reference, and several azimuth errors that appear to be the result of estimating by eye instead of using a more exact method. In c and d, the transposing of the two azimuth values reflects their actual relationship to the two elevations listed (i.e., the temperature element at elevation 725 is at azimuth 258 and the temperature element at elevation 716 is at azimuth 80.) These errors have not resulted in any inappropriate surveillance, since the TE's have always been at the revised locations, and they are used electronically to determine the average temperature. Therefore, the changes are entirely editorial in nature.

II. No. See I above.

III. No. See I above.

Any questions on this submittal should be directed to Mr. R. Sgarro at (215) 770-7916. Pursuant to 10CFR170, the appropriate fee is enclosed.

Very truly yours,

H. W. Keiser  
Vice President-Nuclear Operations
