SUSQUEHANNA STEAM ELECTRIC STATION  
DISCHARGE MONITORING REPORT - JULY 1992  
NPDES PERMIT NO. PA 0047325  
CCN 741326 FILE R9-8A  
PLE-15942

Dear Mr. Wilkes:

Pursuant to Part A, 3.b.(1) of NPDES Permit No. PA 0047325, enclosed is the Susquehanna Steam Electric Station discharge monitoring report for July 1992. Also enclosed is Pennsylvania Department of Environmental Resources' Monthly Facility Report Form (01-112).

There was one noncompliance in July 1992. Total Suspended Solids (TSS) released from internal Outfall 371, Neutralization Basin exceeded the monthly average of 30 mg/l and the maximum daily limit of 100 mg/l. Since the makeup demineralizers are out of service, discharge from Outfall 371 has been significantly reduced allowing for lower flows with high concentrations of TSS. Several possible sources of the high TSS entering the basin were investigated in order to eliminate them prior to entering the basin. Also, the operating procedure for Neutralization Basin discharges has been revised so that future TSS noncompliances can be prevented.

If you have any questions, please contact me at (215) 774-7889.

Respectfully yours,

Jerome S. Fields  
Senior Environmental Scientist - Nuclear
