LICENSEE EVENT REPORT 95-005-00  
PLAS- 632 FILE R41-2

Docket No. 50-388

Attached is Licensee Event Report 95-005-00. This report was determined reportable per 10CFR50.73(a)(2)(iv), in that an unplanned Engineered Safety Feature actuation occurred when the Reactor Protection System initiated an automatic reactor scram following turbine control valve fast closure with power greater than 24% resulting from a Main Generator Load Rejection. The Generator Load Rejection occurred when the 500 kV Switchyard main distribution circuit breaker opened, isolating the Main Generator from the Power Grid.

H. G. Stanley
