November 21, 1995

Mr. Robert G. Byram  
Senior Vice President - Nuclear  
Pennsylvania Power & Light Company  
2 North Ninth Street  
Allentown, Pennsylvania 18101

SUBJECT: NRC COMBINED INSPECTION REPORT NOS. 50-387/95-22; 50-388/95-22

Dear Mr. Byram:

This report transmits the findings of the safety inspections conducted by Ms. M. Banerjee and other NRC inspectors at Susquehanna Steam Electric Station (SSES) from September 19, 1995 through November 1, 1995. At the conclusion of the inspection, the findings were discussed with Mr. H. G. Stanley and other members of your staff. We are providing one report for the inspections conducted during this period in order to better integrate our inspection findings into a consistent regulatory message and more clearly communicate how these findings may reflect a change in your performance.

We noted that the Unit 2 refueling operation was executed in a careful and controlled manner following procedures. The start-up activities were safely performed by knowledgeable operators, with excellent communication, good management oversight and conservative decision making. Excellent cooperation and communications between the maintenance, operations, site and corporate engineering personnel resulted in a thorough review and resolution of 4.16 kV circuit breaker problems.

The NRC staff met with PP&L design and engineering staff in 1994 concerning the vessel level vent modification. Based on a review of the new design, and inspection of the installation on Unit 2, we concluded that the design as installed meets the intent of NRC bulletin 93-03, and is acceptable.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.

Your cooperation with us in this matter is appreciated.

Sincerely,

ORIGINAL SIGNED BY:

Walter J. Pasciak, Chief  
Projects Branch 4  
Division of Reactor Projects
