**ERRATA TO TAPE RECORDING ATTACHED TO NRC
MEETING REPORT 50-387, 388/97-05**

The original tapes (slow speed, one side) were copied onto three standard tapes (normal speed, two sides) for docket distribution. Duplicate tape #3 is mislabelled. Sides 1 and 2 are transposed.

The original tape #1 was copied onto docketed tape # 1 (both sides) and continues on the first part of tape #2, side 1 for about 20 minutes. At the end of the original tape #1 (1/3 through docketed tape #2, side 1), a tone initiates signifying the original machine stopped. The tone continues for the rest of Tape #2 side 1 because the processor did not promptly reload original tape #2. Original tape #2 starts on side 2 of docketed tape #2. There is about 5 minutes of overlap between the original tapes that the recording machine automatically records. This overlap is present on the originals, and is present on the copies. The original tape #2 ends early on docketed tape #3, side 1; followed by the short overlap created by the recording machine.

There is also a small overlap installed by the processor on the docketed tapes at tape #1 side 1 to side 2, tape #2 side 1 to side 2, and tape #3 side 1 to side 2. A similar overlap is present from tape #1 side 2 to tape #2 side 1. However, there is a small gap (about 2 minutes) on the docketed tapes between tape #2 side 2 and tape #3 side 1. This was caused by inadequate overlap installed by the processor during duplication. The length of the gap varies slightly from copy to copy due to variations in the length of each tape. A recording of the discussion omitted from the docketed tapes has been copied from the original recording, and is attached herein.
