RETRACTION OF LICENSEE EVENT REPORT 50-387/97-025-00
PLA - 0004894 FILE R41-2

Docket No. 50-387
License No. NPF-14

This letter is being sent as a retraction of Licensee Event Report (LER) 50-387/97-025-00, Loss of Both Trains of Standby Liquid Control (SLC), issued January 2, 1998. PP&L has concluded that the event is not reportable per 10CFR50.72 or 10CFR50.73, in that the SLC system was operable throughout this event and able to perform its safety function.

The LER described a condition where both SLC accumulators were found partially depressurized. At the time of the event, it was PP&L's practice to conservatively declare a SLC train inoperable if the associated accumulator pressure was found outside of its required band.

PP&L has been reviewing the need for the SLC accumulators since September 1997. As a result of a thorough review and analysis of the SLC system and design history, PP&L has concluded that SLC meets all design requirements without the accumulators, including the requirements of the Technical Specifications and the Anticipated Transient Without Scram Rule, 10CFR50.62.
