Docket No. 50-387
License No. NPF-14

Attached is Licensee Event Report 50-387/98-006-00. This report describes an event in which the Unit 1 Reactor Building discharge vent gaseous effluent monitor was declared inoperable per Technical Specification 3.3.7.11. Technical Specification 3.3.7.11 action states, in part, that effluent releases may continue for up to 30 days, provided samples are continuously collected with auxiliary sampling equipment. During the 101 minutes required for connecting the auxiliary sampling equipment, continuous sampling could not be performed. This constitutes reportability per 10CFR50.73(a)(2)(i)(B). No abnormal plant conditions or evidence of any abnormal release occurred prior to, during, or after the period of time continuous sampling was lost. As such, there were no consequences to the health and safety of the public as a result of this event. In conjunction with the 1998 Improved Technical Specifications implementation plan for Susquehanna SES, a revision to the required action to allow a period of time to restore continuous sampling will be implemented.

G. J. Kuczynski
General Manager - Susquehanna SES
