General Comment

I have read all the information I could find on what are called Small Modular Reactors, or SMA's, and have concluded that it build any of these would be irresponsible. Since there is no approved reactor design for these, they would actually be "experimental" nuclear reactors. Those two words should never go together. These reactors use a great deal of water, which we need to start to conserve, not squander. These SMA's will produce nuclear waste, which takes thousands of years to disappear, and we have no safe place on earth to store it. The cost of solar energy has dropped a great deal in recent years, and that would be a much better alternative to SMA's. We also can build wind turbines, and use solar energy. Anything would be better than any kind of nuclear facility, especially one that we don't know is safe.
