General Comment

RE: Docket No.NRC-2017-0094

I will limit my comments to the six specific topics and to the use of 131 I. I will also not go into the additional explanations unless they have not been covered by the previous comments of physicists and physicians.

- A. I am 100% in favor of the " Dose Limit" patient release threshold.
- B. The above should apply on a "per release" basis.
- C. I would keep the 5mSv dose limit to the general public. However, I favor a 1mSv limit for children and pregnant women. I am completely opposed to lodging patients in hotels or similar abodes. Caregivers are a different situation and has to be individualized. Here i suggest following strict "ALARA" principles.
- D. Specific requirements for exposure of children and pregnant women should be incorporated.
- E. It has been my practice for 50 years to discuss with the patient what will be required at least two days before the therapy.
- F. It is good medical practice to discuss with the patient the isolation requirements as there is much misinformation in the outside world, but a specific regulation is not needed..
