Docket Nos. 50-10/237(249)  
50-254/265  
50-295/304

Mr. Cordell Reed  
Assistant Vice President  
Commonwealth Edison Company  
Post Office Box 767  
Chicago, Illinois 60690

Gentlemen:

AUG 10 1979

In May 1976, we issued guidelines reflecting the NRC's policy regarding the implementation of General Design Criterion 3 - Fire Protection. Since that time, you have performed a fire hazards analysis for your facilities and have compared its fire protection program with the NRC guidelines.

In late 1976, we set October 1980 as the date for completing the implementation of all modifications associated with this program. This implementation schedule recognized that such modifications should be completed as soon as practical, with due consideration of the nature of the modifications. For example, minor modifications, adoption of administrative controls and additional portable equipment would be completed within six months; however, major modifications would require a year or more to complete and some modifications would be coordinated with refueling outages.

By their Memorandum and Order in the matter of the Union of Concerned Scientists' Petition for Emergency and Remedial Action, dated April 13, 1978, the Commission directed the staff to use their best efforts to maintain this schedule, and also directed that the Commission be advised if any slippage is anticipated, along with suggested corrective actions.

*continue to*  
We urge you to apply your best efforts to maintain your schedules for completion of all of the fire protection modifications at your facilities and to submit, on an expedited basis, any information that is still outstanding with regard to open items and required design details.
