EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)
U-2 was at steady state power when U-3 scrambled and a Group II Isolation occurred, "A" SBT system, in primary, tripped after start, and "B" SBT system, in standby, started. Since the redundant system operated successfully, the safety significance of this event was minimal. A similar event occurred previously (Ref. 78-36-03-L-0).

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)
A blown fuse in the "A" SBT system heater control circuit caused the "A" SBT system to trip when selected in primary. The blown fuse was replaced by an equivalently rated slow blow fuse. "A" SBT system was AUTO started in primary and ran successfully. No further action is necessary.
