Subject: Grand Gulf - Acceptance Review of Relief Requests PRR-GGNS-2017-1, PRR-GGNS-2017-2, and PRR-GGNS-2017-3, Jockey Pumps (CAC Nos. MF9749, MF9750, and MF9751)

By letter dated May 25, 2017 (Agencywide Documents Access and Management System Accession No. ML17145A310), Entergy (the licensee) submitted relief requests (RRs) PRR-GGNS-2017-2, and PRR-GGNS-2017-3 as an alternative to the inservice testing program for Grand Gulf Nuclear Station, Unit 1. These RR's are needed to support the 120 month updates to the upcoming 4th interval. PRR-GGNS-2017-1 deals with Residual Heat Removal System Jockey Pumps A, B, and C, PRR-GGNS-2017-2 addresses Low Pressure Core Spray System Jockey Pump, and PRR-GGNS-2017-3 is associated with High Pressure Core Spray System Jockey Pump.

The purpose of this letter is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed RR's in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. You will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence.

Based on the information provided in your submittal, the NRC staff has estimated that this licensing request will take approximately 360 hours to complete. The NRC staff expects to complete this review approximately by March 23, 2018. If there are emergent complexities or challenges in our review that would cause changes to the initial forecasted completion date or significant changes in the forecasted hours, the reasons for the changes, along with the new estimates, will be communicated during the routine interactions with the assigned project manager. These estimates are based on the NRC staff's initial review of the application and they could change, due to several factors including requests for additional information, or unanticipated addition of scope to the review.

If you have any questions, please contact me at (301) 415-1564.
