Subject: [External_Sender] Re: Docket ID NRC-2015-0227
Date: Monday, June 26, 2017 3:44:09 PM

Hello,

The emergency plan for the NuScale reactor should be the same as for any other nuclear reactor.

Even if just one 50MW reactor was built-in an emergency the results could be SIGNIFICANT.

Just because the nuclear industry claims these smaller reactors will be safer does not mean the rules should be changed-they have NO PROVEN track record.

We don't trust their promises.

Small reactors may have accidents that release large amounts of radiation!

Public health is a crucial responsibility of the NRC.

We are opposed to changing the rules for NuSclae reactors!

The nuclear power industry is not to be trusted when it comes to radioactive accident potential.

This is far too sensitive an issue to ignore the potential for the impact on the health and safety of people nearby the INL.

Thank you for listening to our opinion of this rule change.

We have lived in southeast Idaho for 42 years and understand the issues surrounding radioactive materials very well.

Sincere and patriotic Idaho citizens,

Margo & Dennis Proksa
