---

To whom it may concern,

My name is Chad and I live in Boise, ID. I work in the energy sector as an engineer. I have the following comments regarding the Emergency Planning zone rulemaking as it pertains to the NuScale facility.

- The emergency planning rule should be the same for NuScale as any other nuclear reactor.
- The NuScale facility is not small. It would be a cluster of one dozen 50 MW reactors equivalent to one 600MW reactor, and in an emergency the results could be large.
- There is no evidence that new reactors will be safer than old ones. The “safer” reactors have no proven track record since they haven’t been built.
- The rules should not be changed just because the nuclear industry claims that they will be safer.
- The proposed rule is flawed because a single small reactor could still have a large release.
- Above all else, the rules should protect public health in the event of a nuclear reactor accident

Thank you.  
Chad
