General Comment

With regard to question E, I absolutely believe that the NRC should have a specific requirement for the licensee to have a patient isolation discussion with patients in sufficient time prior to the administration of radioactive iodine to provide the patient time to make isolation arrangements or the licensee to make plans to hold the patient, if the patient cannot be immediately released. I had to assume the responsibility for educating myself when my daughter unfortunately needed to have RAI. I did extensive research to ensure that not only my family, but also those around us with whom we had shared walls, would remain safe from the RAI. I'm sure there are many people who do not have the resources or ability to do such extensive research, and as a result are perhaps endangering themselves or others.
