**Name:** Shannon Warner

## General Comment

Please keep patients in the hospital until they are deemed to be safe around the public again. It would have been much easier on my family and myself had I been being cared for in a hospital and wouldn't have had to worry about accidentally exposing anyone to anything.

My dad had three doses of RAI, the last of which was 400 mci, and he was still allowed to come home and risk exposing his family to very dangerous levels of radiation. I was diagnosed with thyroid cancer a year and a half after his passing and I believe exposure to the radiation at the very least didn't help. Please consider requiring patients to be treated in the hospital.
