General Comment

Does this arrangement (as an LLC) convey enough protection to the American taxpayer should the de-commissioning fund dry up? I could have this wrong, but it seems that this would shield Entergy from having to pony up more money in the future in the event costs spiral beyond what is currently anticipated, which is bogus. They profited immensely over the past decades on this and would happily enough leave the taxpayers with the bill, as the business model they've clung to dries up under technologies (such as PV Solar, passive solar, geothermal, wind) that should have supplanted them as a power source over a decade ago for cost and safety.

Long term internment/spent fuel pools are not safe nor are the dry cask storage systems as they are in place in the US. Please to not allow for the absolution of liability of this, or any nuclear energy providing company, through the use of tricky business tools, shell companies, disassociated LLCs etc.
